Free-Standing Vertical Laminar Flow Stations

See Catalog 105

Page 406

- Economical system provides a laminar flow of HEPA-filtered air to meet the most critical contamination requirements
- Incorporates industry-leading 48 dBA blowers for quiet, low-vibration operation
- All-stainless steel or powder-coated steel construction is cleanroom compatible and easy to clean
- Side panels and optional motorized front sliding shield effectively control the laminar air stream to achieve the air speed you require
- Fluorescent illuminators ensure easy viewing
- Backpressure gauge with audible alarm helps monitor filter performance
- Optional ionization equipment safely neutralizes static charges throughout the work area for effective ESD and particle control
- Accommodates standard Terra work benches in many materials, as well as standard Terra wet processing stations (see page 30)

Terra Universal's Vertical Laminar Flow Station combines several of our most advanced products in a state-of-the-art work station that removes particulate air-borne contamination.

Fluorescent light standard; UV sterilization bulbs available

Side Panels ensure effective laminar flow

Work Surfaces* available in many sizes and materials.

Two-piece design isolates FFU vibration.

Digital Control Panel

- Filter/Fan Unit
- Light
- Backpressure alarm

Motorized Sliding Shield* extends 3"-25" below hood to restrict access to work area and improve system efficiency. Rated for millions of operations!

Strip shield access curtain *

Modular Cleanroom Drawers*—select stainless steel or plastic

IonBar™—Safe static control! See page 12

*System option

NOTE: All prices and specifications are subject to change without notice. Crating charges apply to selected items. Call for information.

Ordering Information

Order the Vertical Laminar Flow Station, Filter/Fan Units (FFUs), and other optional accessories separately from the charts below. Selected accessories are installed in the corresponding Vertical Laminar Flow Station and shipped as a turnkey system, ready for operation.

Sliding Shield With Motorized Control

Automatically extends and retracts at the press of a button. Static-dissipative PVC eliminates static and particle attraction. Includes installation of clean-operating brushless motor and safety mechanism that stops shield in the event of power failure. Order shield separately.

Filter/Fan Units (FFUs) 115VAC, 60Hz*

See chart below for quantity required

Nominal Dim. width x length	Avg. Flow @ 90 FPM	HEPA FFU		HEPA FFU with Ionizing Bar**

Horizontal Laminar Flow Station

- The ideal processing environment for contamination-sensitive materials
- Dual multi-speed filter/blower modules direct a continuous wash of HEPA- or ULPA-filtered air forward across the work area
- Take-up ducts along front and side edges minimize turbulence and backwash in the work area
- Face velocity is adjustable from less than 90 FPM to higher than 130 FPM
- Built-in recessed illuminator provides diffused lighting without interfering with laminar flow
- Electropolishing available to remove embedded subsurface particles in stainless steel surfaces
- Fluorescent lighting standard, UV sterilization lamps available

Model shown: No. 9620-44
For complete specifications: TerraUniversal.com

Return air ducts minimize turbulence and backwash

Terra's Horizontal Laminar Flow Station provides an economical work environment that exceeds the most stringent contamination requirements in the pharmaceuticals, biotech, electronics and semiconductor industries.

Powerful filter/blower modules provide a back-to-front laminar flow of filtered air across the work surface. The adjustable multi-speed, direct-drive blowers let you adjust air speed (90-130 feet per minute) to meet your requirements while providing low noise and vibration levels.

For enhanced air-stream control, this station also features return ducts along the front and side edges of the work area. These ducts enhance system efficiency by reducing backwash, the most common source of turbulence in a laminar flow system.

** Work top and side panels are of the material indicated. All exterior surfaces are powder-coated CR steel.
*** 99.99% efficient @ 0.3 micron particles. ULPA filters also available.

Ionizing Filter/Fan Units—
see page 12

Laminar Flow Station

Terra's Portable CleanBooth™ is ideal for kitting operations, assembly, or work with probe stations, screen printers and other free-standing or benchtop process equipment. The backbone of the system is one or more filter/fan units (FFUs), each with industry-leading low-noise impeller blowers. Flexible side curtains create a 3-sided enclosure, enhancing the laminar flow. See other options below.

Mobile Frame Support

Includes set of 4 casters, 2 with locking brakes. Order FFUs below.

Vertical Laminar Flow Hood

Terra's CleanCube™ provides a vertical laminar flow of filtered air to provide a particle-free processing environment.

Its one-piece hood design eliminates cracks and crevasses where germs or particles can collect. The radius corners are easy to wipe down, and the absence of corner support members ensures a full view of work in progress. It also eliminates the cramped, claustrophobic feeling that operators experience when working with only partial visibility. Fan/Filter Unit (FFU) provides 310CFM average flow of HEPA-filtered air at 260 ft./minute.

See page 1 for information on cleanroom work benches.

Radius corners wipe down clean!

Access shield tilts up to accommodate process equipment.

WhisperFlow™

Benchtop Hoods

This versatile laminar flow hood gives you a particle-free work environment on any available work surface.

It consists of two modules: a filter/fan unit (FFU), which houses a particle filter, and a hood. The 24" x 48" x 12.25" FFU houses a HEPA filter, rated 99.99% efficient with 0.3 micron particles. Its internal baffle system ensures uniform face velocity, and its 50 dBA noise rating is the best in the industry. Other sizes available at TerraUniversal.com

Benchtop Universal Hood

- Completely modular design lets you configure an economical hood and filter/blower configuration to your specs!
- As a Mini-Laminar Flow Hood, it provides a continuous wash of HEPA- or ULPA-filtered particle-free air to the work surface
- As a Ductless Exhaust Fume Hood, it ventilates and purifies hazardous exhaust fumes for safe indoor release
- As an Exhaust Fume Hood, it draws fumes from the work area to your in-house exhaust system
- Select single or twin hoods (for one or two operators), in many materials to suit specific applications

Terra's Universal Hood functions either as a particle-free mini-cleanroom work environment or an exhaust venting/purification station. Its practical, fully modular design allows you to construct an economical system that's just right for your requirements.

Ductless exhaust configuration, shown with polypropylene hood and filter/blower housings, optional AirGard® and stand.

Includes air speed monitor

Vertical Laminar Flow Configuration, shown with AirGard™ and vibration-isolated stand

1. Select a Hood

Begin by selecting the hood size (large or small, available for single or twin stations); then choose the material that's right for your application. Each hood comes with a swing-up access shield of a compatible material, indicated on the ordering table.

Universal Hood Nominal Dimensions (in inches)								
Type	A	B	C	D	E	F	G	H
Small Single	16	24	4	31	36	17	23	8
Large Single	19	28	8 1/2	39	45	21	27	8
Small Twin	16	24	4	64	72	17	23	8
Large Twin	19	28	8 1/2	83	90	21	27	8

Type	Universal Hoods (includes access shield of materials indicated in parentheses)

* Acrylic is damaged by alcohol and other cleaning agents.

Hood

Performance Hood Size	Laminar Flow*		Exhaust Fume**	
	Flow	Velocity	Flow	Velocity
Small Single	800 CFM	175 ft./min.	200 CFM	117 ft./min.
Large Single	800 CFM	175 ft./min.	200 CFM	90 ft./min.
Small Twin	1600 CFM	175 ft./min.	400 CFM	111 ft./min.
Large Twin	1600 CFM	175 ft./min.	400 CFM	88 ft./min.

* Average values for operation with HEPA filter(s) No. 1681-02 (twin stations use two filter/blower modules) at "high" setting. Velocity reading taken at the filter face; speed adjustable down to 100 ft./min.

** Average values for operation with activated charcoal filter(s) No. 1716-00A (twin stations use two filter/blower modules). Exhaust systems operate at "high" setting only (no speed control). Velocity readings taken at hood inlet with shield down (8" gap).

2. Select a Filter/Blower Module

For high-velocity exhaust fume requirements, select Terra's Benchtop Ductless Exhaust Fume Hood on pg. 17

Laminar Flow Station

This positive-pressure configuration allows filtration of particles to ensure a uniform, contamination-free flow of air to the work surface. It thus provides a mini-cleanroom environment for particle-sensitive operations in microelectronics, biotech, and many other industries. See performance chart above.

Ductless Exhaust Fume Hood

This negative-pressure system ventilates and purifies hazardous fumes generated under the hood, allowing safe indoor release of exhaust. It is ideal for such operations as soldering, screen printing, and chemical mixing. Its portability enables you to put a cover on operations that might otherwise create a toxic work environment! See performance chart above.

Portable Exhaust Fume Hood

This negative-pressure system is designed to ventilate fumes to your in-house exhaust system, usually by means of an exhaust duct.

Note: Twin stations require two blower modules.

Select **HEPA** or **ULPA Filter**, along with **Blower** and **Filter Housing** of desired material.

Select **Exhaust Purification Filter**, along with **Blower** and **Filter Housing** of desired material.

Select **Adapter Panel** for connection to in-house ventilation system.

Universal Hood

4. Select a Stand

Both designs feature raised lips to hold the hood securely in place. All frames (whether isolated or not) are made of rigid square tubing with a white powder-coat finish, and include stainless steel scuff sleeves to prevent scuffing along the bottom leg support. The work surface stands 32" above the floor. Be sure to select the size (large or small, single or twin) to match your hood.

Vibration-isolated stand with free-standing hood frame isolates blower vibrations.

Non-isolated (one-piece) stand

AirGard™ Air Velocity Monitor (installed)
Monitors air velocity (70 - 250 ft/sec; 0.35 - 1.25 m/sec) to ensure laminar flow or ventilation efficiency.

Mini-Environment Equipment Enclosure

No. 2003-20 with optional filter module and side doors.

- A particle-free, static-safe environment for microelectronic equipment, balances, scales and other sensitive equipment
- Interchangeable access ports let you configure the optimal enclosure for your application —
 - Solid Panels
 - Glove Ports
 - Iris Ports
 - Access Doors
 - Microscope Bellows
 - Custom Interface Modules
- Select application-compatible material: acrylic, polycarbonate, static-dissipative PVC (custom materials available)
- Optional HEPA filter/fan unit provides industry-leading quiet operation and low vibration
- Two-piece stand isolates work station from blower vibration
- Terra customizes to your requirements for special dimensions, cut-outs, low/high temperature and humidity control

These Mini-Environment Equipment Enclosures provide a controlled environment for delicate process equipment. Each includes dual front doors for easy access. The bottomless design allows convenient placement over equipment; select the optional spill tray if a bottom is required. Standard size: 49"W x 25"D x 30.25"H (without filter/fan module). Door opening: 22.38"W x 22.25"H (for each door).

Two-piece stand isolates fan vibrations.

Purifier® Delta Series Biological Safety Cabinets

- Meets NSF designation for Class II, Type A2 Biological Safety Cabinets
- Offers the largest working area of any biological safety cabinet in its class
- Safety features include fully closing, counterbalanced tempered glass sash with audible/visual alarm indicator

The Purifier® Delta Series Biological Safety Cabinets set the standard for safety, performance and ergonomics.

They meet or exceed all the standards set forth by the NSF International, including 99.99% efficient HEPA filters, nominal inflow of 105 fpm, and all positive-pressure ducts surrounded by negative pressure plenums. Their advanced airflow design, which includes aerodynamic Air-Wave™ Entry System and an air foil with strategically placed containment slots, ensure optimal operator protection and a 30% exhausted/70% recirculated air ratio called for by NSF standards.

Purifier™ Delta Series cabinets also include safety features you won't find elsewhere, including an exclusive sash pocket that protects the user from potential exposure to work area contaminants that may adhere to the sash interior. The sash also provides tactile feedback to the operator not to lift it beyond its 8" working height. Raising it beyond this point triggers an audible/visual alarm.

Purifier™ Delta Series Biological Safety Cabinet

Four-foot nominal width; sash opens to 8". Operates on 115VAC, 60Hz. For full specifications, and ordering information on 3' and 6'-wide models, as well as models with 10" sash openings, visit TerraUniversal.com.

220VAC/50Hz	1530-40A-220	4,982.00

Pass-Through

Laminar Flow Cabinets

- Maintains a Class 100 (ISO 5) environment for work with contamination-sensitive materials
- Airflow design maintains the 70% recirculation/30% exhaust ratio specified for Class II, Type A2 Biological Safety Cabinets
- Unique pass-through design features interlocked sashes that allow access from one side only
- Negative pressure in work area and all plenums protects operator and external environment against biohazards
- Includes PLC controls and fluorescent lighting (UV germicidal lights available)

Terra's Pass-Through Laminar Flow Cabinet is designed to provide a clean, safe processing environment with dual-side access.

Its unique design features electronically activated opposing sashes that are interlocked to allow access from only one side at a time. Status lights indicate which side is locked out. Intake/recirculation vents located on the leading edge, below each sash, provide 100 feet/minute inflow past the operator into the hood with the sash raised 8", ensuring the necessary operator protection against fumes inside the work area.

Air exits the work area under negative pressure through the system plenum to the blower, where 70% is recirculated through the system HEPA filter (rated 99.99% efficient @ 0.3µm particles) and 30% is exhausted, also through a HEPA filter, into an 8" exhaust line. An exhaust thimble is installed in the exhaust duct, in accord with NSF requirements for Type A2 Biological Safety Cabinets.

The system's PLC panel controls operation of the system blower and fluorescent lights; UV germicidal lights are also available. A backpressure gauge monitors filter operation and indicates the need for filter replacement.

Electronic interlocks and status lights ensure access from one side only.

Dimensions: 60"W x 24"D (at work area) x 96"H. Includes two tempered glass sashes and two 110VAC duplex outlets. Operates on 110VAC.

	Cat. #	\$/Each
Pass-Through Laminar Flow Cabinet	2148-20	19,500.00
Germicidal Light Package	2148-21	400.00

High-Capacity,

HEPA-Filtered Air Handler

- Provides a high-volume flow of HEPA-filtered air (3000 CFM average)
- Ideal for a wide range of critical environment applications —
 - ✓ decontamination of surgical zones, even field surgical tents
 - ✓ emergency ventilation of contaminated facilities
 - ✓ creation of clean zones within an existing clean room

Terra's High-Capacity Air Handler provides up to 3200 CFM (3000 CFM average) of HEPA-filtered air. In a positive-pressure system, it provides particle-free air to a remote enclosure, creating a clean environment in nearly any space. Used as a ventilator, it removes sub-micron particles, including aerosols and most bacteria, from an exhaust flow to allow safe indoor release. Dimensions: 30"W x 48"D x 31"H (67" with built-in stand). Stainless steel housing with 16" dia. inlet/outlet flanges.

		Cat. #	\$/Each
High-Capacity Air Handler	120VAC	6710-68	5,640.00
	208VAC	6710-68-208	5,640.00
HEPA Filter		2100-20	289.00

99.99% efficient @0.3µm particles

Suitable for indoor or outdoor use

Ionizing Equipment

Helps control static charges and the contaminants they attract!

- Provides a balanced stream of positive and negative ions to neutralize static charges and eliminate particle attraction
- Ideal for use with pharmaceutical powders, ESD-sensitive microelectronics, and other delicate materials
- Discharge time: 1000 to 100V in less than 5 seconds (mounted in laminar flow of 90fpm, measured 24" from ionizing bar)
- Low-voltage power supply is intrinsically safe, minimizes EMI/RFI
- Long-lasting titanium emitter points can be replaced in seconds

A. IonBar™ for Benchtop Hoods

Select the bar that fits your hood width. Terra will install with the hood indicated to ensure effective ion distribution by the hood's laminar flow module. **Not shown.**

B. Ionizing Fan Module

Ideal for gloveboxes and other enclosure without laminar flow, this module incorporates fans into a clean stainless steel housing to ensure effective ion distribution. See ordering information below.

C. IonBar™ for OEM Applications

Includes ionizing bar only; order desired transformer separately. For effective operation, this bar must be mounted in a laminar airflow.

Note: Types A,B and D include transformer and installation in specified enclosure.

D. IonGrid™ Ionizing Filter/Fan Unit

Integrates IonBar™ into HEPA filter/fan unit for clean, static-safe operations. Ideal for Terra's Vertical and Horizontal Laminar Flow Stations (page 1 – 3), as well as module cleanrooms. Models below are 110VAC; for 220VAC operation, add –220 to part number. ULPA filter models also available.

Temperature Stability Chamber

- Provides a particle-free, heated environment for biocompatibility testing, sensor calibration and other critical operations
- Segmented access shields afford easy access to large working area
- Maintains stable temperature ($\pm 0.5^{\circ}\text{C}$ between 18 - 25°C) even with access shield partly open

This enclosure maintains extremely stable temperature conditions (21°C , $\pm 0.5^{\circ}\text{C}$) even when the external temperature fluctuates as much as $\pm 20^{\circ}\text{C}$ and the access shield is partially open.

Its large working area (up to 120"W x 54"D x 36"H) is divided into 40"W zones, each with independent access shield and temperature controls. Air flows vertically through 99.99% efficient HEPA filters to provide a continuous wash of laminar-flow air that creates a cleaner-than-Class 100 work environment. Air passes through perforations in the work surface and passes through a 10,000 BTU air conditioning module and then through zone heaters that bring it up to a constant temperature before it circulates through HEPA filters and re-enters the work area.

The system disassembles for convenient shipping and installation in facilities with restricted access. Front access shield cut-outs can be specified for glove ports.

Overall Dimensions	Chamber Size (ID)	40"W Access Zones	Cat. #	\$/Each
40"W x 64"D x 81"H	40"W x 54"D x 36"H	1	1695-23	8,500.00

Refrigerated Incubator

Model shown:
No. 1695-25

See page 35 for other environmental chambers

ECM™ Modular System:

Ductless Exhaust Purifiers

Negative-pressure systems ventilate and purify hazardous fumes generated under the hood, allowing safe indoor release of exhaust. They are ideal for such operations as soldering, screen printing and chemical mixing.

Select the hood material and filter(s) for your application below. They require a work surface that provides at least 44" of depth (for horizontal systems) or 30" (for vertical systems). All components are delivered as a complete turnkey system, ready for operation.

To Order —

1. The chart below indicates the **system widths** available for two, three or four filter packs. Each filter pack includes a primary filter (generally, an activated charcoal filter), and a final HEPA filter, if exhaust must meet critical cleanliness requirements.
2. Select the desired **blower/filter module**. Each polypropylene housing incorporates a 1200 CFM impeller blower for each filter pack, ensuring adequate exhaust flow (see performance graph on facing page).
3. Select the **hood material** for your application.
4. Order the correct number of **filters** for your hood size. The activated charcoal filter listed below is 98% effective at removing a wide range of organic fumes. Pre- and post-filters trap charcoal particles.
5. A **fluorescent light** is recommended for optimal visibility, especially with a polypropylene or stainless steel hood. **Ionizing equipment** is available to protect the work area against surface charges. The optional **AirGard® Air Velocity Monitor** ensures adequate airflow.
6. Select the appropriate **work surface**. Refer to page 4 for benches designed specifically for these systems.

ECM™ Modular System

Exhaust Fume Hoods

Draws exhaust fumes into an exhaust duct for delivery to an in-house filtration system. Each blower module includes multiple 1200-CFM impeller blowers to provide adequate ventilation. An 8"-diameter flange for each blower allows connection to exhaust conduit.

Horizontal Exhaust Fume Hood

Vertical Exhaust Fume Hood

Cleanroom Benches

For ECM™ Modular Hoods

- Allow permanent installation of ECM™ Modular Hoods as complete turnkey systems
- Available in several materials and designs to meet a variety of cleanroom requirements
- Precise sizing eliminates exposed edges that collect particles

These cleanroom benches are designed specifically for use with Terra's Environmental Control Modules (ECMs) listed on the following pages.

Designed to permit fixed (permanent) hood installation, they turn your ECM into a secure, turnkey system with minimal exposed edges that can collect particles. They are available in several materials to match a variety of requirements. Dissipative and nondissipative tables feature laminated surfaces sealed at the top and bottom to eliminate particle shedding. Laminate, polypropylene and stainless steel models include epoxy-finished steel frames with stainless steel scuff guards to prevent chipping of the bottom leg member.

Benches are sized to fit the ECM hood precisely; select the model that matches your system.

Free-Standing Exhaust Fume Hoods

Shown with optional Cleanroom Bench.
(See Catalog 105, page 415 for complete information).

- **Stainless Steel or Powder-Coated Steel Hood** safely vents fumes away from the work surface
- **Optional Exhaust Purification System** (with explosion-proof ventilator) safely removes hazardous fumes for safe indoor release
- **Transparent PVC side panels and sliding shield** control negative pressure under the hood, reduce risk of fumes escaping
- **Steel frame provides sturdy support, isolates hood from work surface**

This Exhaust Fume Hood is designed to afford you maximum economy and flexibility in designing the system that's right for your application.

The frame is fabricated from welded 1½" x 3" powder-coated or stainless steel to ensure sturdy support for the exhaust fume hood. The frame also isolates the hood (and any vibrations the hood causes) from the work surface. A 6" round discharge allows easy connection to your in-house exhaust system to provide the internal negative pressure necessary to safely remove fumes from the work surface.

The front of the unit features an easy-glide sliding shield (also made of transparent PVC mounted in a powder-coated aluminum frame). The Ductless Exhaust Purification Hoods include an explosion-proof blower installed inside the hood and provisions for mounting purification filters and particle filters that safely remove a wide array of fumes to allow safe indoor release of exhaust.

Exhaust Purification Filter (for Ductless Exhaust Applications)

Removes a wide array of fumes for safe indoor exhaust release. Four are recommended for each hood (two stacks of two filters each). Bonded-charcoal design improves safety and performance, contains dust.

High-Clearance Chemical Fume Hood

This benchtop unit features over 28" of vertical clearance with the access shield open. The dual impeller blowers provide ample ventilation under filter load to maintain exhaust air speed ≥ 100 fpm for safe operation and worker protection. A polypropylene tray collects chemical spills, and quick-release clamps ensure easy access to activated charcoal and/or final HEPA filters. The sloped front access provides full view of and access to work in progress. Overall dimensions: 32.5"W x 25"D x 33.25"H (48"H with filter/blower module). Access shield clearance: 15.5" (closed); 28.25" (open).

Exhaust Flow: 400 CFM (with charcoal filter)
350 CFM (charcoal and HEPA final filter)
Air Velocity: 118 ft./min. with shield down
(operated with charcoal filter only)

Exhaust Fume Filtration Systems

A. Exhaust Fume Filter System

This versatile system removes smoke and fumes from soldering, epoxies, solvents or other sources. It is ideal for highly localized operations, for which an exhaust fume hood may be too constrictive or cumbersome. The easy-position swing arm lets you position the pick-up tool exactly where you need it yet won't interfere with soldering or other operations.

Select the desired filter module, exhaust arm, and corresponding bracket and pick-tools. The exhaust arm can be mounted to either a benchtop or wall. The larger, 3" arm requires an adapter for use with the 2" connecting hose.

B. Particle-Free Fume Extractor

Now with bonded-charcoal filter for enhanced performance

This high-capacity unit is perfect for exhaust fume removal throughout the cleanroom or lab.

The high static-pressure, brushless AC vacuum motor draws fumes through an activated charcoal purification filter to remove chemical vapors. The bonded-charcoal design of this filter ensures even air flow across the filter face and eliminates "dead"

A

See Catalog 105, page 418.

- High-capacity unit ventilates large enclosures
- Cleanroom-compatible

B

zones that can compromise filter performance. It also contains charcoal dust for cleaner performance.

Select ULPA final filter for particle-free cleanroom applications. The fume extractor includes a 3"-diameter flange for attachment of a self-locking 5'-long fume extractor arm with funnel nozzle (included). Housing is powder-coated steel.

DownDraft Work Station

- Enhances operator safety during soldering, chemical processing, adhesive coating and other operations involving noxious fumes
- Sub-surface blower/filter module draws fumes through perforated 304 stainless steel work platform
- Activated charcoal filter safely removes a wide range of organic fumes for safe indoor exhaust release

A. DownDraft™ Work Station

This work station is ideal for soldering or chemical processing that requires the removal of potentially hazardous fumes. Its powerful 1200 CFM blower draws exhaust fumes downward, away from the operator, for safe removal and purification. The activated charcoal filter removes 98% of most organic chemical vapors, allowing safe release.

Benchtops, made of cleanroom-grade white laminate, raise the work surface 32" off the floor. Exhaust fumes enter the filter through three perforated stainless steel platforms positioned at the center of the work surface. Specify other desired platform sizes or locations.

Inlet Ports: 3 @ 4.5" x 13.5" each, 304 stainless steel
(call for other sizes)

Exhaust Flow: 120 CFM

Exhaust Velocity: 315 ft./min. downdraft

Ductless Work Station

- Ideal for removing aerosols, soldering fumes, chemical vapors, and other hazards
- Activated charcoal filter is effective with a wide range of organic compounds
- Adjustable safety shield allows wide visibility and arm motion

B. Ductless Work Station

This compact, portable exhaust purification system provides effective protection against fume exposure. It is easy to set up and relocate and allows unrestricted access to the work in progress.

A powerful but quiet variable-speed impeller blower draws fumes from the work area into an activated charcoal filter that effectively removes a wide range of organic fumes, allowing safe indoor exhaust release. An optional HEPA final filter captures fine particles for cleanroom use. Order desired shield and filter(s) separately. Exhaust flow velocity: 160 ft./min.

Sensitive Parts Cleaning

A-B. MicroVac™ Portable Cleanroom Vacuum

The MicroVac™ incorporates a four-stage filtering system to trap particles as small as 0.12 microns. Made of stainless steel, it includes a mini-tool kit for use in drawers, computer keyboards, and other hard-to-clean surfaces.

	Cat. #	\$/Each
110VAC/60Hz	5100-00	955.00
220VAC/50Hz	5100-00-220	955.0

C. SNO GUN™ II High-Precision Cleaner

The safe, inexpensive, highly effective alternative to solvent or dry nitrogen cleaning of sensitive parts! Dry ice particles remove contaminants as small as 0.1 micron without disturbing delicate surface features. Specialized inert gas enclosure available to prevent moisture condensation.

	Cat. #	\$/Each
SNO GUN™ II	4545-00A	2,173.00

D. SnowBox™ Cleaning Chamber

This glovebox maintains an extremely dry nitrogen environment to prevent moisture condensation when the cold liquid CO₂ SNO GUN™ II is used for sensitive parts cleaning (order SNO GUN™ II separately). Many Configurations available.

E. Plasma-Preen Cleaner/Etcher

The first commercial product in its price range that uses microwave energy (2.45 GHz) to clean organic and some inorganic contaminants from a wide range of components and materials, including semiconductors, ceramics and metals.

The microwave energy generates plasma (an electrically neutral, highly ionized gas) under adjustable power, which functions as a safe, effective cleaning medium. Microwave-generated plasma consumes very small quantities of reactants and produces no significant effluent. In addition, microwave generation allows you to control process temperatures between 25°C and 200°C. Low process temperatures enable you to clean a wider variety of sensitive components without worrying about heat damage.

Plasma Preen Cleaner (With Ion Trap)

Reactor Type	Chamber Dimensions	110VAC/60Hz Cat. #	\$/Each

Laboratory Accessories

A. Enclosed Safety Shower

Protect your personnel against hazardous chemical burns! This fully enclosed polypropylene booth features easy-parting PVC strip curtains and immediate-response handles that activate an overhead shower and eye washers. All hardware is cleanroom compatible and chemical resistant. The sloping bottom feeds into a 2 1/2" drain line. Overall dimensions: 38"W x 41"D x 90"H.

Cat. # \$/Each
1530-50 5,530.00

B-D. Acid Transport Carts

Made of stress-relieved polypropylene. All three designs feature recessed receptacles that collect spills into an easy-empty containment reservoir. Acid-resistant neoprene swivel casters are included.

Type B features 12 or 18 removable 7" x 7" inserts for one-gallon bottles.

Type C is ideal for larger, heavy containers. Compartments: two @ 17" x 26.5" x 17" and two @ 17" x 36.5" x 14"

Type D features 24 angled 7" x 7" slots for one-gallon bottles and one top compartment for gloves, safety glasses and other small items.

Polypropylene Acid Transport Carts

Type (see photos)	No. of Compts.	Cat. #	\$/Each

C	4	3401-30	2,253.00
D	25	3401-31	2,845.00

E. PureDry™ Cleanroom Hand/Glove Dryer

Provides warm, contamination-free air for drying hands and gloves. Sound dampened for quiet operation. ULPA filter captures microcontaminants.

	Cat. #	\$/Each
120VAC/60Hz	3333-33	1,802.00
220VAC/50Hz	3333-34	1,802.00

F. Washing/Drying Station

Includes an ULPA-filtered, heated overhead dryer and DI-water sink, both activated by an IR "photoeye" for clean, no-hands operation. Other sizes available.

	Cat. #	\$/Each
One sink model	9600-05	5,273.00
Two sink model	9600-06	10,439.00

G. Chemical Safety Cabinet

This electropolished 304 stainless steel enclosure features adjustable perforated shelving to accommodate chemical containers of many sizes. Dual locking doors provide security, and heavy duty locking casters facilitate chemical transport throughout your facility. Complies with OSHA/NFPA fire safety regulations. Overall dimensions: 43"W x 18"D x 65"H.

	Cat. #	\$/Each

Wet Processing and Cleaning

Compare Terra's Value and Versatility

Value Design and Engineering

Whichever stations you choose, you'll find flexible designs that let you specify the processing configuration for your application.

Complete Facility Integration

Terra's engineers and installation technicians work with yours to accommodate existing chemical delivery systems, fire suppression systems, exhaust disposal systems, and other facilities.

Fire Detection Systems

Specify the fire safety measures for your application. Terra offers multi-spectral equipment that detects varying degrees of fire danger.

Custom Work

Put Terra's comprehensive design and fabrication experience to work on your application!

Terra's online **QuickQuote Planner** configures a system to your specifications:

Wet Processing and Cleaning Cabinets

Polypropylene stations are ideal for acids and caustic chemistries (shown with optional gooseneck faucets, spray guns, casters and duplex power outlets)

Fire-retardant polypropylene available!

- Incorporates all processing components into one self-contained, easy-to-clean system
- Isolated control panel allows safe, convenient operation of baths, rinsers, and other process modules
- Select all-polypropylene or stainless steel shell
- Standard system includes sliding access shield and fluorescent illuminator
- Custom engineered to meet specific application requirements!

These self-contained Wet Processing Cabinets provide the perfect turnkey solution for a wide range of cleaning and processing requirements.

The standard models listed below include a reinforced cabinet of the specified size and material, a sliding access shield, and a fluorescent illuminator. A control panel to the right of the process deck provides safe, convenient access to all system controls (order processing sinks and baths separately). Support posts with polypropylene leveling feet provide stable positioning. Select optional 4"-diameter retractable casters for more convenient mobility.

You Specify the Process Workflow— Let Terra Take Care of the Rest!

Whatever your application, Terra engineers will work with yours to develop a deck configuration that's right for your process. One cabinet can house up to 14 separate processing baths, rinsers, and other process modules, which can be arranged in a single or double row. A raised lip surrounds the work area to prevent floor spills. A full-length plenum sink located under the work surface contains overflow for easy disposal, and an optional plenum flush quickly empties the plenum through a 2"-diameter drain valve.

Convenient front-panel valves control operation of nitrogen or auxiliary gas equipment, DI water, exhaust venting, and power. The control panel includes power on/off switch, a static pressure gauge (to monitor the exhaust flow), and a system fuse. A storage area below the deck holds collection tanks or reserve chemicals.

The optional Filter/Blower Module provides a vertical laminar flow of HEPA-filtered air for particle-sensitive applications. Exhaust fumes can be ducted through a 10"-diameter flange located on the top of the cabinet (see airflow illustration). Specify other desired flange diameter or location.

Complete Line of System Features

Visit TerraUniversal.com for pricing and specifications.

Glove Washers

Specifications

- Construction:** All stress-relieved white polypropylene (½" thick) or all 304 stainless steel. Standard plumbing is PVC (specify stainless steel or other desired material).
- Exhaust:** Ducted through a standard 10"-diameter flange positioned at the top rear of the cabinet (see airflow illustration). Specify other desired flange diameter or location.
- Storage Cabinet:** 70" or 92"W x 42"D x 12"H; dual sliding doors.
- Drain:** 2" NPT female, located at bottom of sub-deck plenum.
- Power:** 120VAC, 60Hz or 220VAC, 50Hz, depending on component selection. Power outlets available for process equipment.
- Illuminator:** Fluorescent, 100 foot candles. Does not disturb air.
- Controls:** Instrument panel provides power switch, power indicating light, light switch, static pressure exhaust meter, and power fuse.
- Dimensions:** 84" or 108"W x 43"D x 72"H (nominal)
- Filter/Fan Unit:** Optional FFU generates 650 CFM of air at filter pressure drop from 0.350" to 0.795" W.G. at 90 FPM. Noise factor: 50 dBA. Filter type: 99.99% efficient HEPA.

Stainless steel processing cabinets are recommended for solvents and flammable chemicals (shown with optional casters and spray gun)

Note: All models listed above include an adjustable PVC sliding sash (to restrict airflow to the work area), a static pressure exhaust meter (to monitor the pressure differential in the exhaust line), and a fluorescent illuminator. All electronic controls are located on a vertical panel to the right of the work area (left side mounting may be specified at no extra charge). PLC controllers are also available; call for quotation.

Processing & Cleaning Modular Stations

See Catalog 105

Page 550

Versatile Configurations

Overhead control panel eliminates the need to reach over process tanks.

Containment hood collects and condenses vapors.

Adjustable baffles let you balance the bi-directional air flow at the work surface.

Process baths can be configured in a single or double row to accommodate workflow.

These modular, economical stations are configured to meet your processing requirements for bath layout, particle-free laminar flow, exhaust fume removal—even robotic transfer.

Like the models on the previous pages, these benches accommodate a complete line of baths, rinsers, cleaners, and other processing modules to suit your application. All polypropylene models are compatible with most acids and other process chemistries. Stainless steel models are suitable for solvent cleaning applications. Select among these standard configurations:

Standard Wet Bench

For use with Vertical Laminar Flow Hood

This economical design allows placement beneath a laminar flow hood. A 10"-diameter flange on the rear of the station connects to your in-house ventilation system. A 2.5" raised lip prevents floor spills, and perforations along the front lip safely drain spills into the full-length plenum sink. An optional plenum flush quickly empties the plenum through a drain valve.

Convenient front-panel valves control operation of nitrogen or auxiliary gas equipment, DI water, exhaust venting, and power. A storage area below the deck holds collection tanks or reserve chemicals.

Process bath controls are mounted at the rear of the station, immediately above air-flow control baffles.

Standard Wet Bench

—with Overhead Control Case

As an alternative to a side control module, process bath controls are mounted inside an overhead control case. This configuration eliminates the need for operators to reach over baths in order to access controls. For additional safety, an optional vapor containment hood is installed over the work deck.

Standard Wet Bench

—with Side Control Module

For use with Vertical Laminar Flow Hood

In many applications, safety dictates that process bath controls be isolated from the process baths. A side control module allows operators convenient access to all system controls without the need to reach over potentially hazardous process chemicals. The housing includes all electronics, and allows convenient service access from the right side of the unit.

Customized to Your Specifications!

Because no two applications or facilities are identical, Terra will work with you to customize a solution to your processing needs.

Optional Motorized Sliding Shield

Standard Wet Bench, shown with Vertical Laminar Flow Hood and optional faucet and spray guns.

Stainless Steel Solvent Cleaning Bench

Polypropylene Acid/Base Etching Bench

When ordering, please specify desired location of optional processing modules (tanks, sinks, spray guns, etc.). Deeper decks are available for double rows of process baths.

Ordering Info

Prices below are for a base system (without faucets, spray guns, tanks, or other processing modules). Order wet processing modules from the pages that follow. When ordering each module, specify the desired panel locations on the work area.

"Installed Prices" include plumbing, electrical connections, and system testing. Additional charges may apply for special plumbing materials or for third-party lab certification; call Terra for a quotation.

Note: For Terra's standard terms and conditions, refer to Catalog 105, page 2.

Wet Processing & Cleaning System Options

Terra offers a comprehensive range of constant temperature baths, etching baths, and dump rinsers to meet other size and temperature requirements. Call to discuss your application.

Qa Series Quartz Constant Temperature Bath

Unsurpassed temperature uniformity in etching, stripping, and cleaning operations using H₂SO₄, HCl and other chemistries.

Ultra-pure quartz processing vessel is ideal for critical chemistries. Externally bonded, 5-sided circuit heating element provides efficient, even heating. Housing is polypropylene. Includes redundant safety features.

Nb Series Silicon Nitride Etch Bath

Engineered to provide unparalleled process control, safety, and consistency in Silicon Nitride etching.

Pure quartz vessel with PVDF refluxor to condense chemical vapors — ideal for chemical with high flash points or for high-temp operations. Maintains consistent chemistry temperature and acid/water ratio. 360° nitrogen-purged housing seal reduces acid penetration of heating element for extended service.

F Series Subambient Filtered Etch Bath

Ensures purity of NH₃, HF, BOE, CH₃, COOH, and HNO₃ positive resist developer.

Continuously filters process chemistry to increase purity and maximize yields. 360° serrated overflow weir enhances particulate removal. Pump/filter assembly is easily removed for quick filter changes. Available in natural polypropylene or PVDF.

A Series Constant Temperature Bath

Economical polypropylene etching with HF, KOH, BOE, CrO.

Provides precisely controlled low- or high-temperature processing when used with RCe recirculating module. Also functions as a stand-alone ambient temperature bath. Includes pneumatic drain, stirrer and safety cover.

RCe Series Temperature Controller

Heats and chills while preserving process purity. (Use A or F series baths above)

Includes low-watt density heater for a long, reliable life and improved MTBF. Operates on CFC-free HCFC-22 coolant.

DR Series Wafer Dump Rinser

The Right Way to Rinse: requires less DI water, and less DI water disposal.

Natural polypropylene rinse tank, tubing, nozzles and valves ensure wide chemical compatibility. Includes dual overhead spray manifolds with low misting nozzles and 360° serrated overflow weir for enhanced particulate removal.

* Selection of RCe module required for heating/cooling of the A or F Series modules. Models listed are polypropylene; PVDF also available.

Critical Environment Solutions **Product Showcase**

"Squaroid" Vacuum Ovens

These ovens provide a max. temperature of 220°C. Radiant warm-wall heating provides more even chamber temperature, and built-in high-limit thermostat guards against overheating. Models below feature LED temperature readouts and operate at 120VAC; 240VAC and dial thermometer models are also available, as well as high-temperature models.

Chamber Volume	With LED Readout	
Cat. #		\$/Each
0.7 cu. ft.	3700-80	2,560.00
2.3 cu. ft.	3700-82	4,412.00

Hi-Temp "Squaroid" Oven

Includes hydraulic thermostat controls for heating up to 300°C. Radiant warm-wall heating provides uniform temperatures and eliminates the hazards of open-wire heaters. Externally isolated heaters maximize safety and chamber space. Top-mounted operation panel controls vacuum to nearly 30" Hg. Chamber interior is stainless steel. Models below are 120VAC; 240 VAC models also available.

Chamber Size	Cat. #	\$/Each
1.1 cu. ft.	3700-39	5,312.00
1.7 cu. ft.	3700-41	5,548.00

Class 100 Cleanroom Oven

Four-segment programmable controller provides precise heating to 250°C. Models below include HEPA filters that make them compatible for use in Class 100 (ISO 5) cleanrooms (models also available without HEPA filters for less stringent requirements). Interior walls are stainless steel, with stainless steel bottom and sidewall plenums. Delrin hinge pivots eliminate metal-on-metal surfaces. Model below is 120VAC; 240 VAC models also available. Includes 2"-dia. exhaust vent, .125" NPT fitting for introducing inert gas or house air, and four adjustable stainless steel shelves. Chamber size: 2.8 cu. ft.

Cat. #	\$/Each
3700-70	8,358.00

High-Capacity, HEPA-Filtered Cleanroom Oven

This oven provides a stable elevated temperature (60°C, ± 2°C) for a very large stainless steel chamber: 36"W x 36"D x 90"H (37.5 cu. ft.). Air or process gas is forced through dual HEPA filters located above the ceiling of the process chamber; continuous recirculation ensures temperature uniformity and a better-than Class 100 (ISO 5) process environment. Includes temperature uniformity certification based on 9-point temperature mapping. Overall dimensions: 43.5"W x 42"D x 107"H.

Cat. #	\$/Each
2148-15	25,600.00

No. 3700-85 (14 cu. ft.)

Large-Capacity Forced-Air Ovens

PID temperature controls provide stable heating to 220°C, and a unique turbo blower system creates true one-pass circulation pattern for optimal uniformity and fast recovery time. Includes an electronic digital timer with large LED display and overtemperature protection and isolated heating elements. Chamber interior is stainless steel. Models below are 120VAC.

Chamber Size	Cat. #	\$/Each
14.0 cu. ft.	3700-85	4,130.00
28.0 cu. ft.	3700-86	5,517.00

Tube Furnaces

Ideal for growing electronic crystals, doping silicon wafers and many other microelectronics applications. Features temperature range from 100°C to 1200°C. Two interchangeable vestibule ends (1" and 2" dia.) accommodate tubes up to 2" in diameter. Chamber operates remotely or in horizontal, angular or vertical positions. Models below are 120VAC; select manual or single setpoint control. Length: 12".

Control Type	Temp. Range	Cat. #	\$/Each
Manual	370°C to 1100°C	4000-69	1,599.00
Single Setpoint	100°C to 1200°C	4001-86	1,965.00

Environmental Chambers

These microprocessor-controlled chambers provide precise control over environmental conditions for repeatable results in material testing, component burn-in, shelf-life monitoring, and other critical studies. **Refrigerated Incubators** provide precise temperature control from 5°C to 60°C.

Stability Chambers add a relative humidity system with solid-state humidity sensor and controller that allow humidification and dehumidification for operation from 20 to 98%RH. All incorporate environmentally friendly HFC refrigerant and CFC-free insulation. Light packages and chart recorders are optional. Models below are 115VAC; 230VAC also available

Benchtop Muffle Furnaces

These muffle furnaces offer a heating range from 100°C to 1200°C and two chamber sizes. A ceramic shelf (standard for 350 cu. in. chambers) effectively doubles the working area. Open-coil heating elements on both sides of the chamber and high thermal-efficient ceramic insulation provide temperature uniformity and heating efficiency. A built-in venting system removes contamination and moisture. Models below are 120VAC; 240 VAC models also available.

Control Type	Chamber Size	Cat. #	\$/Each

RH/Temperature Stability Chamber

This stainless steel cabinet is configured for storage of polycarbonate films used for high-precision screening of circuit boards. It maintains critical relative humidity and temperature levels to prevent dimensional aberrations that result from exposure to humidity and temperature fluctuations.

Air circulates horizontally across the shelves that hold the film. As air exits the storage area, it passes through an air conditioning/heating module that conditions it to within $\pm 2^\circ\text{F}$ of the temperature set point. In addition, the continuously operating A/C module removes moisture to keep the %RH level within $\pm 3\%$ of the set point. If humidity falls too low, an ultrasonic humidifier cycles on to add the proper amount of water vapor. If the temperature falls too low, the heater module cycles on. A water filtration system removes contaminants from the humidification feed water to eliminate the chance of mineral deposits or other vapor-borne contaminants.

As the process air exits the RH/temperature modules, an impeller blower draws it into an intake plenum area and forces it uniformly back through the storage area.

Ultrasonic Cleaners

These Branson CSA-listed cleaners provide thorough, safe cleaning of small- and medium-sized parts. Models below feature heat controls with digital timer and degas function, which allows immediate use at maximum efficiency. All operate on 115VAC; 230VAC and other heating and timer configurations are also available.

Tank Capacity	Cat. #	\$/Each
0.5 gallons	2631-00	394.00

B-300 Tabletop Ultrasonic Cleaner

Provides quick, consistent, high-quality cleaning over a wide range of applications. Includes a stainless steel cleaning tank with integral industrial-style ultrasonic transducer technology. The deep drawn tank has no corner welds or other dirt-catching surfaces, and includes a cover and perforated stainless steel parts basket. Tank dimensions: 11.8"L x 3.9"W x 2.9"D. Capacity: 0.5 gallons. UL and CSA listed; meets CE requirements.
